

I'm not robot!

templates, and more available. Use them as they are or change them up to suit your needs. Content planning is our bread and butter. We also have plenty of plugins and an API. All of this is done under one roof, which makes handing it all off to the folks in the next phase of the design and implementation process incredibly easy.OmniGraffleAnother big player in the information architecture software game is OmniGraffle. If you're using a macOS or iOS device and prefer to have the software actually downloaded to said device, this is an option for you. Diagramming, wireframing, rapid prototyping, and design are their specialties. Lots of great tools, and again if your preference is having software on-device or you just really like using your Apple Pencil, then OmniGraffle is a viable option.Information architecture and SEO; you can't and shouldn't have one without the other. Each discipline has its own nuances and rules to follow, but when they work together, they create a digital product that people actually want to use and one that can actually be found...so you can actually turn a profit. We've discussed IA and its many facets, but let's add in how SEO plays into that.Heading architecture SEO techniquesSEO keywords in headings and within heading tags are essential and are noted by search engines, so they should definitely be taken into consideration and kept up to date.Managing keywords for current SEO trendsAs stated above, keeping those SEO keywords up-to-date is all but required because the internet is an ever-evolving, living, breathing thing (in the theoretical sense). Strategically selected SEO keywords are what help your site rank more favorably on SERPs (search engine result pages).Avoid duplicate contentThis is significant from two angles. Make sure to not have duplicate content of your own site (one page being the same as another within your site or family of sites), and make sure to not duplicate content from other sites as it waters down integrity. That second one should be obvious, but if it isn't, you can trust and believe Google will eventually clock you for it, and they really know how to hold a grudge when it comes to this topic. You don't want Google penalizing you. Let that be the only warning you need on the matter. Duplicate content waters down the integrity of the content, and at that point, what good is good IA if nobody's there looking at the content?Information architecture examples are truly everywhere we look. It isn't always a digital product - it could be signage in a crowded subway station or airport terminal. The setup of a grocery store. The order of information within your favorite app. We mentioned earlier that good IA is IA that you don't even notice; it just works well. Information architecture diagrams, flowmaps, mindmapping, wireframing, card sorting, labeling, and structuring are just some of the many ways you can get the most out of your content.Luckily for the people who work in the UX/UI/IA industry and for the rest of us who are all using their products, there are a lot of great tools available for creating excellent and effective IA in website design. You can also check out more information on how to design a website right here in Slickplan! Hopefully, we've made it abundantly clear how necessary IA is and how much of it there really is floating around out there. You'll probably start to notice it a bit more in your daily life.Information architecture web design is just one piece of the puzzle when designing and creating a digital product, but by now, you've seen just how big of a difference it can make and how consequential it is to get it right. Your product depends on it, and your customers expect it. Rest assured, if you don't get it right, someone will gladly let you know.📧FAQs
